

FIX OR REPLACE

SIGNS TO REPLACE YOUR AIR CONDITIONER

You hear weird noises; your AC leaks or only lukewarm air comes from the vents. Should you fix or replace the air conditioner? Advantage Plumbing and Heating contractors note signs it's time to replace the AC.

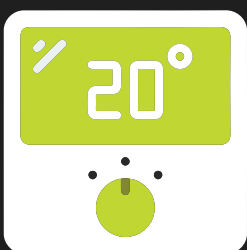

AC Won't Turn On

If your AC won't turn on at all, you probably cannot fix the air conditioner. Instead, our team can install a new, more efficient system.

Air Conditioner More Than 10 Years Ago

ACs more than 10 to 15 years old require frequent maintenance and repair. Continuing to fix the AC won't necessarily prolong the life of the unit. So, maybe it's time to replace the air conditioner

Non-Responsive Thermostat

If you keep dialing the thermostat closer to zero with no temperature change, chances are you need to replace it or your AC. Call Advantage Plumbing Heating and Cooling to replace the AC to keep your energy bills down
